

SAND PRO HC8030

(High Capacity Self-Contained Sanding Station)

2- sided rubberized top is reversible for twice the life

Comes with felt lined platforms, squared stop, and 1 stainless steel hanger for a 5" or 6" air orbital sander

Comes with quality 3" swivel casters

Includes motor starter

1.5 HP T.E.F.C. motor with 16" steel backward incline fan

The Sand Pro HC8030 is a high capacity self-contained downdraft table that uses singed tube filters that are 99% efficient at 1 micron. The dust is then dropped into two pans. The HC8030 draws evenly through the entire top and the two sided rubberized top provides twice the life of the work surface. There is no protruding exhaust hood to interfere with working on all four sides. This machine is not only great for collecting sanding dust, but ideal for applications that remove large amounts of stock such as routing, carving, and solid surface milling.
